

Report Of

**Web Development Internship: Design and Development of an Admin
Portal at Infiniti Tech Solution, Noida**

Submitted

To

School of Computer Science and Engineering
IILM University, Greater Noida

In partial fulfilment of the requirement of degree of
B.Tech CSE (AI/ML)

By:

Tanwi Singh (CS-23411509)

Batch: 2023-27

2026-27

CANDIDATE'S DECLARATION

I, Tanwi Singh do hereby declare that the internship report titled "**Web Development Internship: Design and Development of an Admin Portal**" at Infiniti Tech Solution has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own work and has not been submitted to any other institute for any degree/diploma requirement, and I shall be solely responsible for any kind of copyright violation in this regard.

Tanwi Singh

Roll No.: CS-23411509

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the internship program. I am especially thankful to Mr. Durgesh Nagvanshi, my internship guide, for his aspiring guidance, invaluable constructive criticism, and friendly advice during my work on the admin portal development and related web design tasks between July 1, 2026 and August 14, 2026. I am sincerely grateful to him for sharing truthful and illuminating views on a number of issues connected with this work.

I would also like to thank the faculty of the School of Computer Science and Engineering, IILM University, Greater Noida, for their continuous guidance and encouragement throughout this internship.

I express my gratitude to my parents for their blessings.

Tanwi Singh

Internship Completion Certificate

Ref: ATPL/HR/IC/2026

Date 01st Sep 2025

CERTIFICATE OF Internship

TO WHOMSOEVER IT MAY CONCERN

*This is to certify that **Ms. Tanwi Singh** completed her training as a **Web Designing** at **Infiniti Tech Solution**, Noida, from **01st July 2026** to **14th August 2026**.*

*During his training period, she gained hands-on experience in hosting and managing multiple applications such as (**Admin Panel, Landing Page ,UI/UX implementation**).*

Ms. Tanwi was found to be regular, punctual, and enthusiastic, and she consistently demonstrated a willingness to take on additional responsibilities during her tenure with us.

We wish her every success in her future career.

Infiniti Tech Solution

Diksha Chauhan

Chapter 4: Project Description

4.1 Introduction

This report presents the work carried out during a Web Development Internship undertaken at Infiniti Tech Solution, Noida, Uttar Pradesh, as part of the B.Tech Computer Science and Engineering (AI/ML) curriculum at IILM University, Greater Noida. The internship was completed over a period of 45 days, from July 1, 2026 to August 14, 2026, under the guidance of Mr. Durgesh Nagvanshi, Web Developer. The primary aim of the internship was to gain practical, industry-level exposure to web development by contributing to the design and development of an admin portal, along with related website design tasks, thereby bridging the gap between academic learning and real-world software development practices.

4.2 Organization Profile

Infiniti Tech Solution is a Noida-based IT services company that was established in 2012 with the goal of providing effective, technology-driven solutions to industry challenges. The company offers services across web and mobile application development, digital marketing (including SEO, PPC, and social media), and managed IT support, catering to startups, SMEs, and larger enterprises. Its work primarily involves helping clients build, maintain, and grow their online presence through responsive, user-friendly websites and result-oriented digital strategies.

4.3 Problem Statement

The organization required a properly structured, responsive, and user-friendly frontend for an internal admin portal that could support authentication, a dashboard, and content management functionality. In addition, the company's own client-facing website needed a structured review, as informal observation suggested inconsistencies in layout and responsiveness across different screen sizes. There was a need to (a) build a clean, functional frontend for the admin portal, and (b) systematically document UI and responsiveness issues on the existing website so that they could be prioritized and fixed.

4.4 Project Objectives

- To design and independently develop the complete frontend of an admin portal, including its authentication pages, dashboard, and CMS (content management system) components.
- To ensure the admin portal's interface is clean, consistent, and responsive across common screen sizes.
- To conduct a structured UI and responsiveness audit of the organization's website and document the issues found.
- To strengthen practical skills in JavaScript and modern frontend tools such as Tailwind CSS.
- To present the completed work to stakeholders through internal demos and incorporate their feedback.

4.5 Scope of the Project

The scope of the internship work was primarily frontend-focused. It covered the design and development of the visual interface and client-side behaviour of the admin portal's login/authentication screens, dashboard views, and CMS pages. It also covered a UI/responsive design audit of the organization's main website across desktop, tablet, and mobile breakpoints. Backend logic, database design, and server infrastructure for the admin portal were maintained by the organization's existing development team and integrated with the frontend built during the internship; these were outside the direct scope of this internship.

4.6 Technologies and Tools Used

The following technologies and tools were used while completing the internship tasks:

Technology / Tool	Purpose in the Project
HTML5	Structuring the pages of the admin portal (login, dashboard, CMS)
CSS3	Styling and layout of all frontend pages
Tailwind CSS	Utility-first styling framework used to speed up responsive UI development
JavaScript	Client-side interactivity, form validation, and dynamic dashboard behaviour
Git & GitHub	Version control and tracking of code changes during development
Browser Developer Tools	Debugging layout issues and conducting the responsive/UI audit

Table 4.1: Technologies and Tools Used

4.7 System Architecture

The admin portal follows a simple client-facing architecture, where the frontend developed during the internship communicates with the organization's existing backend and database layer. The figure below outlines this at a high level.

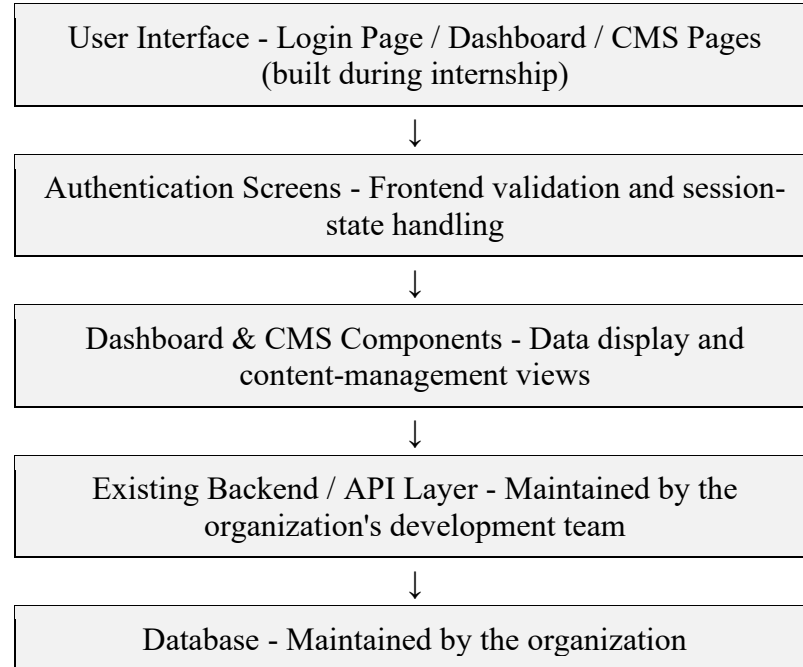

Fig. 4.1: System Architecture of the Admin Portal

4.8 Methodology

- Requirement discussion: Understood the required pages and functionality of the admin portal through discussions with the internship guide.
- Reference and planning: Reviewed existing design references and planned the page layouts and component structure before coding.
- Page-wise development: Built the login/authentication pages, dashboard, and CMS pages incrementally, testing each page in the browser as it was completed.
- Responsive styling: Used Tailwind CSS utility classes to ensure pages adapted correctly across different screen sizes.
- Website audit: Manually reviewed the organization's website page by page using browser developer tools, noting UI and responsiveness issues and categorizing them by priority.
- Review and feedback: Presented completed work in stakeholder demos and revised pages based on the feedback received.

4.9 Expected Outcomes

- A complete, working frontend for the admin portal covering authentication, dashboard, and CMS pages.
- A documented UI/responsive design audit of the organization's website, listing issues across priority levels for the team to act on.
- Stronger practical proficiency in JavaScript, responsive design principles, and Tailwind CSS.
- A portfolio-ready project demonstrating real-world, industry-level frontend development experience.
